## Principles for software composition 2024/25

01 - Unification, goal-oriented derivations, mathematical induction

[Ex. 1] Let  $\Sigma_0 = \{0\}$  and  $\Sigma_1 = \{s\}$ . Extend the logic program that defines the predicate  $sum \in \Pi_3$  (seen in classroom) to define:

- 1. a predicate  $\operatorname{prod} \in \Pi_3$  for computing the product of two numbers;
- 2. a predicate  $pow \in \Pi_3$  for computing the power;
- 3. a predicate  $div \in \Pi_2$  for telling if the first argument divides the second.

[Ex. 2] Given the syntax in Ex. 1, solve the unification problems below

- 1.  $G_1 \stackrel{\text{def}}{=} \{ \operatorname{prod}(\mathsf{s}(x), y, \mathsf{s}(z)) \stackrel{?}{=} \operatorname{prod}(y, z, x) \}$
- 2.  $G_2 \stackrel{\text{def}}{=} \{ \mathsf{pow}(x, \mathsf{s}(y), x) \stackrel{?}{=} \mathsf{pow}(\mathsf{s}(y), z, z) \}$
- 3.  $G_3 \stackrel{\text{def}}{=} \{ \operatorname{div}(x, \mathbf{s}(y)) \stackrel{?}{=} \operatorname{div}(z, x) , \operatorname{div}(y, \mathbf{s}(z)) \stackrel{?}{=} \operatorname{div}(u, \mathbf{s}(u)) \}$

[Ex. 3] Given the logic programs in Ex. 1, write some possible goal-oriented derivations for the queries:

- 1. sum(x, s(0), s(s(0)))
- 2. prod(s(s(0)), y, s(s(0)))
- 3.  $\operatorname{div}(z, s(s(0)))$

[Ex. 4] Prove by mathematical induction that:

$$\forall n > 0. \ n^n \ge n!$$

[**Ex. 5**] Let

$$a_0 \stackrel{\text{def}}{=} 0 \qquad a_{n+1} \stackrel{\text{def}}{=} 2a_n + n$$

Prove by mathematical induction that:

$$\forall n \in \mathbb{N}. \ a_n = 2^n - n - 1$$

[Ex. 6] Let  $F_i$  denote the *i*th Fibonacci number.

$$F_1 \stackrel{\text{def}}{=} 1$$
  $F_2 \stackrel{\text{def}}{=} 1$   $F_{n+2} \stackrel{\text{def}}{=} F_n + F_{n+1}$ 

Prove by mathematical induction that:

$$\forall n > 0. \ \sum_{i=1}^{n} F_i = F_{n+2} - 1$$
